Hegmakart Data Governance & Taxonomy Guidelines

Overview

To ensure a premium, easily navigable, and medically compliant e-commerce experience on Hegmakart, strict data governance must be maintained for product uploads.

Free-text entry for core product attributes leads to data fragmentation (e.g., listing "3M", "3M ESPE", and "3 M" as separate brands), which breaks sidebar filters, degrades search accuracy, and harms the customer experience.

Policy: The core columns listed below are **strictly locked/predefined**. The procurement and marketing teams must select from the approved database dropdowns. **Adding any new value to these lists requires formal approval.**

Tier 1: Strictly Predefined & Locked Attributes

These are the most critical data points for clinical e-commerce. No free-text entry is allowed.

1. Category & Subcategory

The organizational backbone of the platform.

- **Examples:** *Consumables, Equipment, Instruments, Orthodontics.*
- **Why it's locked:** Prevents products from being orphaned or placed in redundant categories (e.g., "Dental Chairs" vs "Chairs").

2. Brand / Manufacturer

The primary identifier for buyers.

- **Examples:** *3M, Dentsply Sirona, GC, Ivoclar Vivadent.*
- **Why it's locked:** Prevents spelling variations, case-sensitivity issues, and duplicate brand pages.

3. Country of Origin

Crucial for clinical buyers who prefer specific manufacturing standards.

- **Examples:** *India, Germany, USA, Japan, Switzerland.*
- **Why it's locked:** Prevents inconsistent entries like "GER", "Germany", and "Made in Germany".

Tier 2: Highly Recommended Controlled Attributes

These attributes drastically improve the filtering experience on the frontend and should be transitioned to predefined lists wherever possible.

4. Dental Specialty / Application

Dentists often browse by their specific clinical discipline.

- **Approved Values (Examples):** *Endodontics, Orthodontics, Prosthodontics, Periodontics, Oral Surgery, Pedodontics, General Dentistry.*
- **Why it matters:** Prevents messy, overlapping tags like "Endo", "Root Canal Prep", or "Ortho". It ensures that a periodontist can confidently filter for all relevant tools with one click.

5. Primary Material (For Consumables/Instruments)

The material composition is a primary deciding factor for clinical purchases.

- **Approved Values (Examples):** *Zirconia, Glass Ionomer, Composite, Titanium, Alginate, Stainless Steel.*
- **Why it matters:** Eliminates variations like "SS", "St. Steel", and "Stainless-Steel", ensuring materials are universally searchable.

6. Packaging / Unit of Measurement

One of the most common areas for messy e-commerce data.

- **Approved Values (Examples):** *Box of 100, Syringe, Cartridge, Bottle, Pack of 5.*
- **Why it matters:** Standardizing the packaging type prevents one product from being listed as "Bx" and another as "1 Box". Clean units of measurement make price-per-unit comparisons much easier for the clinic buyer.

7. Certifications & Compliance

Because these are clinical products, regulatory tags must be absolute.

- **Approved Values (Examples):** *FDA Approved, CE Marked, ISO Certified, Sterile, Non-Sterile.*
- **Why it matters:** Builds extreme trust with buyers. You want these to be definitive, controlled checkboxes rather than unverified free-text fields.

8. Equipment Compatibility

For parts like air rotors, handpieces, or scaler tips, compatibility is the primary filter criteria.

- **Approved Values (Examples):** *KaVo Compatible, NSK Compatible, W&H Compatible.*
- **Why it matters:** A predefined list ensures that a dentist looking for an "NSK compatible rotor" finds every single one you offer without having to guess search keywords.

Procedure for Adding New Attributes

If a product requires a Brand, Category, or Material that does not currently exist in the system:

1. **Do NOT** attempt to bypass the system by entering it in the product description.
2. Submit a formal request to the database admin / IT team to have the new value approved and added to the master taxonomy database.
3. Once added, it will become available in the dropdown for all future product uploads.
